

DecentraGuild: Empowering Gamers through Collaborative Play

A vision coming to life...

"It all started with a couple of gamers who wanted to start collaborating and create an alliance. They agreed on the terms and shared a vision, becoming the first founding members of the newly formed dGuild. Together, they planted a seed in a small container of the NFT funding round. If this round succeeds, the seed becomes a sprout, with the dGuild vault as its roots and its little trunk being the first multi-sig for management. They then planted this sprout into the soil of the sKing vault for a solid foundation and financial stability. The water in that ground is the wForce vault, which fuels the sprout.

The sprout grows and creates its first branches, represented as departments. These branches have little twigs called clans or project groups, all consisting of multi-sig wallets. Sometimes these twigs will start to flower and grow fruits as rewards. Some fruit falls on the ground, turning into soil for sKing rewards, while others might be taken by a member through the wForce rewards. Together, they keep feeding this tree, making it flourish and grow strong with more branches, more members, and more assets that they control, all contributing to this micro ecosystem together. The founding members might leave, but their tree will live on (-chain)."

A need for Collaborative Gaming

DecentraGuild is born out of the need of this revolutionising gaming industry, with a real possibility to monetize your assets and requirements to invest in the game items before you can truly start. Opening up a lot of new hurdles that we need to cross. By empowering gamers to collaborate, create, and thrive together in the blockchain gaming space, they are able to create incredible value. But how are you going to split these massive achievements? Who will control and own them? We set out to create a platform that brings gamers together in a decentralised ecosystem. Our goal is to enable seamless asset sharing, foster collaboration, and provide a space where gamers can unleash their true collaborative power.

Enter the dGuild Gaming Ecosystem

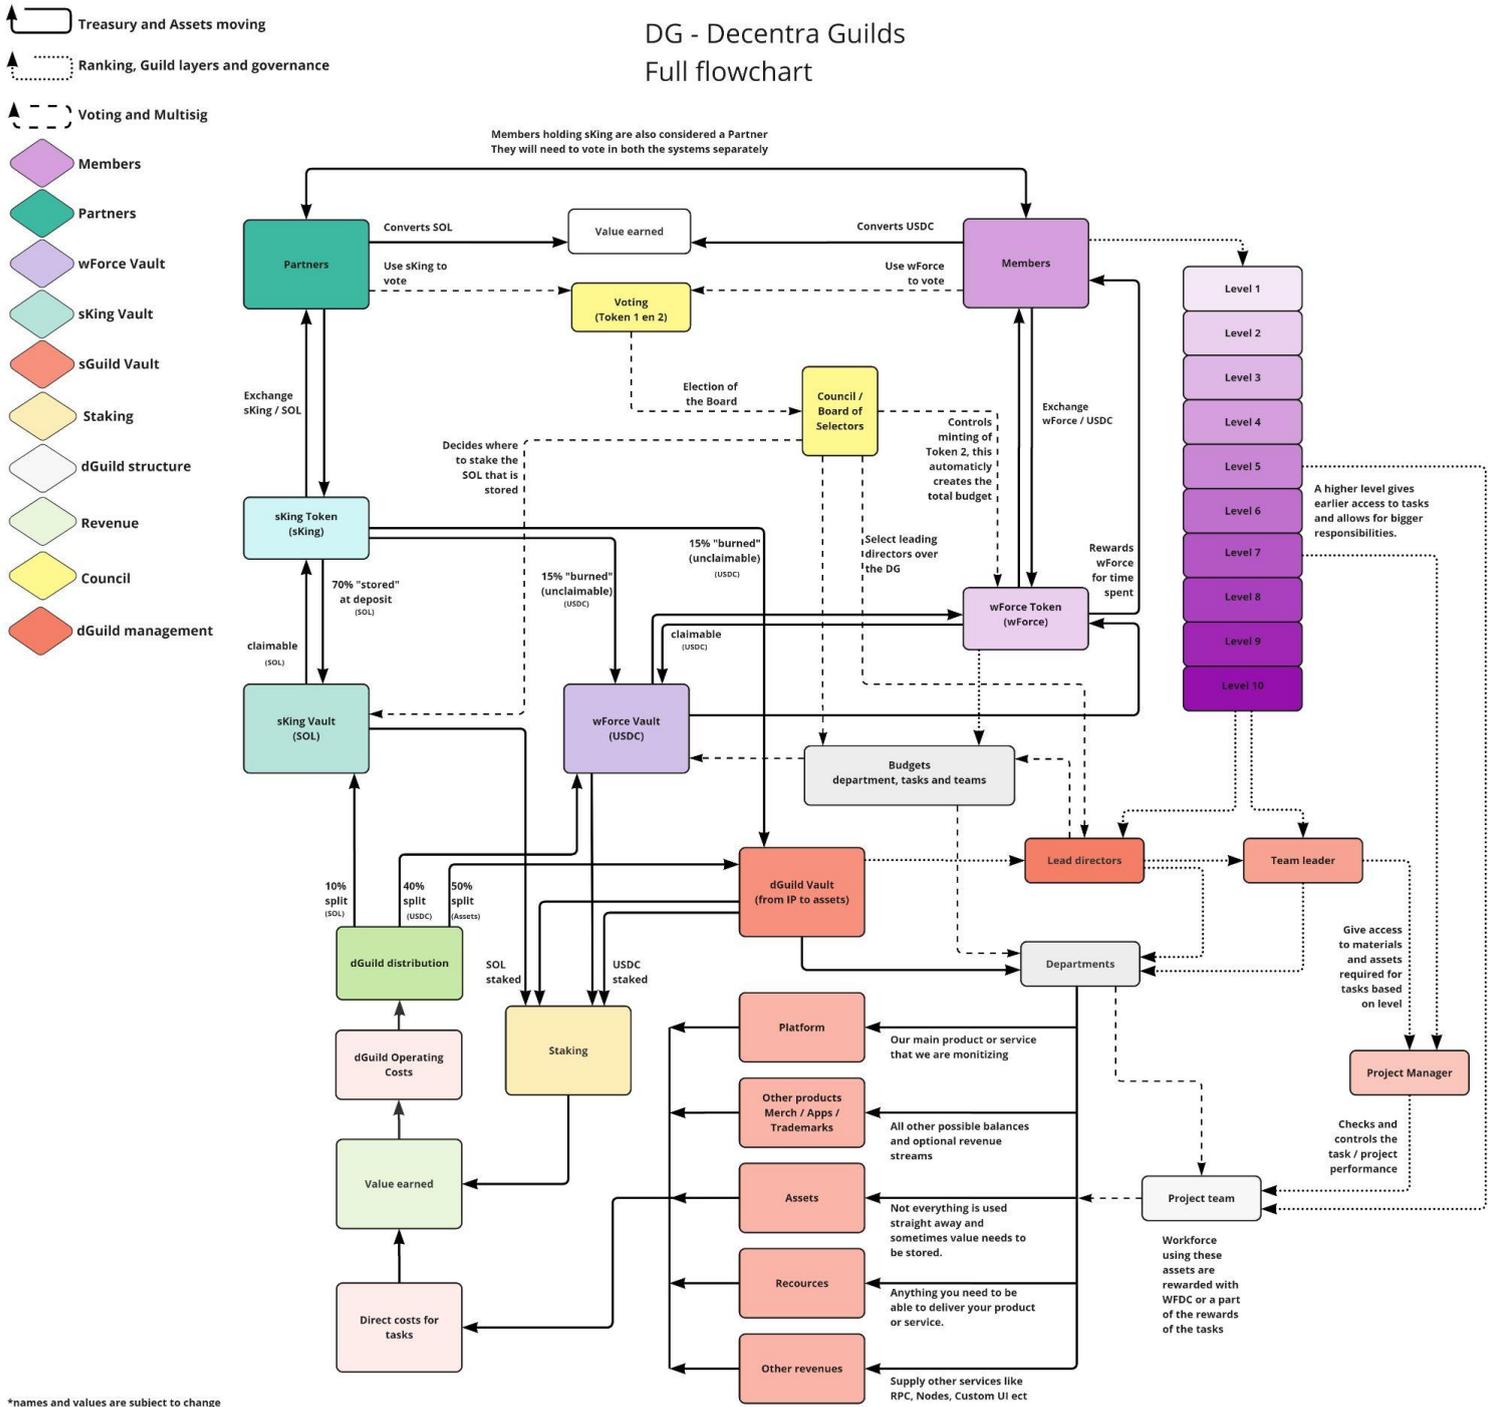

DecentraGuild wants to introduce the concept of the dGuild gaming ecosystem, a dynamic community where gamers can connect, collaborate, and build their own virtual realms together. Each dGuild ecosystem operates independently, with its unique set of rules, governance, and private token accounts that track your members' contributions, all on-chain. At the heart of these ecosystems lie the Vaults, secure repositories that house the underlying digital assets of the dGuild, including a diverse range of in-game items, characters, and virtual treasures.

The Power of Collaboration and Creativity

DecentraGuild empowers gamers to collaborate and share assets seamlessly within the dGuild gaming ecosystem. By leveraging blockchain technology, gamers can collectively create, manage, and verify. The dGuild platform provides tools and resources to facilitate communication, project management, and asset sharing, allowing gamers to unleash their collective creativity and bring their shared visions to life. The members are in full control of their own ecosystem, collectively signing off on distribution through multi-sig and DAO voting.

DecentraGuild: Empowering Gamers through Collaborative Play

List of variables that each dGuild gets to choose, from ticker name to % differences between them. Important is to keep in mind that this is of course depending on finding legal compliance and allowing us to roll out our concept as intended, we might need to adjust small pieces but we know that there are corporate structures that align with our model.

Color	Platform fixed	Platform fixed	Platform fixed
Legenda	dGuild decide	dGuild decide	dGuild decide
Vault	Staking Vault	wForce Vault	dGuild Vault
Tokens	sKing	wForce	
Circulating supply cap	10,000	Infinite	
Starting Ratio	1:1	1:10	
PAIR	sKing/SOL	wForce/USDC	
Current marketprice	\$15.48	\$10.00	
Function	Yield bearing	Reward contributors	Receive all revenue
Mint Ratio	Ratio is based on current value in vault and circulating amount of tokens	Ratio is fixed can only be altered by a vote with the max rate per mint cycle	
Minted by	Minted only if Members stores value, if dGuild distributes value it increases the claim per token	Minted when receiving value distribution by the dGuild vault	
Mint cycle	Till supply cap is reached	Monthly	
Ownership entity %	20.0%	80.0%	
Voting %	20.0%	80.0%	
Voting time	7 days	7 days	3 days
Value distribution	10.0%	30.0%	60.0%
Token claim release	7 days	Instant	
"The Burn" applied	30.0%	0.0%	0.0%
"The Burn" received	0.0%	15.0%	15.0%
